

The 'Frog' range of control desks builds upon the foundations of the Sirius and XL families using the latest technologies to bring new and improved features. As Zero 88 products, the Frog desks naturally retain the same ease of use, reliability and affordability as their predecessors.

The FatFrog can control up to 48 generic channels, which may be manually or automatically patched to any of the 512 DMX channels, there is also capability for control of up to 12 intelligent fixtures. The desk is fitted with a floppy drive for loading and saving show data, a remote 'Go' port and the option for a monitor.

Memories can be recorded as scenes or chases, each having its own fade times and modifiers. Memories may be played back with the crossfade master and the 'Go' button for sequential, pre-programmed shows. Extra flexibility is afforded through the 108 submasters allowing for the creation of lighting effects for the more spontaneous shows.

Don't be fooled by its simplicity and ease of use; the Fat Frog offers a host of powerful features, making it a formidable tool for creating shows. Its versatility makes it ideal for all entertainment lighting applications allowing even relatively inexperienced operators to create exciting shows.

The movement effects engine allows for simple and rapid programming of commonly used effects, whilst the inbuilt fixture library enables simple selection and manipulation of the moving lights. The unique 'F.R.O.G.' (fixture random output generator) function can instantly generate unique lighting effects. These may be outputted automatically or stepped through, with desired looks being recorded as required.

As Frog, plus
Ability to control 12 moving lights
F.R.O.G (Autochase)
Effects generator
Fixture Library
Up to 999 memories
Twin Isolated DMX outlets
